### Report Overview

Advanced packaging refers to the techniques beyond traditional packaging methods, such as 2.5D and 3D packaging, fan-out wafer-level packaging (FOWLP), and other innovative packaging solutions. Advanced packaging technologies require materials that will allow for better resolution of patterns associated with the ever more challenging device architecture, along with materials that will allow for higher throughput.

Advanced packaging photoresist products are specialized materials used in the photolithography process for advanced semiconductor packaging applications.

Photolithography is a crucial step in semiconductor manufacturing where a pattern is transferred onto a substrate, typically a wafer or other packaging material, using photoresist materials.

The global Advanced Packaging Photoresist Products market size is projected to reach US\$ 1128.42 Million by 2029 from US\$ 606.20 million in 2022 at a CAGR of 9.93% during 2023-2029. 5G, smart home, Internet of Things, big data and advanced information technology It has driven the growing demand for semiconductors and electronic equipment and promoted the development of the advanced packaging photoresist market. The proliferation of technologies such as advanced packaging and miniaturization, as well as continued technological advancements in emerging applications such as virtual and augmented reality, enhance market prospects. The increase in functional density of large-scale system-on-chip solutions, continued R&D investment, and advances in advanced packaging technology are also important driving forces for market development.

Challenges facing the advanced packaging photoresist products market include the complexity of semiconductor manufacturing processes and the growing demand for improved photoresist materials that match higher resolutions and smaller feature sizes. High development and production costs make it more difficult to launch new products,

especially in fierce market competition. Driven by environmental concerns, strict regulations and standards may limit the expansion of certain photoresist materials, increase the complexity of the production process, and impose restrictions on research and development. The recovery of the semiconductor industry is affected by macroeconomic conditions and product cycles, which will pose challenges if the overall industry recovery is slow. The limited supply of raw materials, coupled with the anti-globalization trend and external risks, may affect the production stability and cost of the photoresist upstream supply chain.

Segment by Type, the Advanced Packaging Photoresist Products can be split into Positive-tone Photoresists, Negative-tone Photoresists, etc. Currently, the Positive-tone Photoresists category dominates the overall market and accounted for 55.56% market share in 2022. Positive photoresists are widely favored in semiconductor manufacturing due to their inherent properties and suitability for various applications. A key factor is their ease of use in the photolithography process. Positive photoresists enable a simple and efficient patterning process, making them suitable for high-throughput production environments. In addition, positive photoresists have better photosensitivity and can create finer and more complex patterns at higher resolutions. The versatility of positive photoresists makes them ideal for applications in advanced packaging, where precise and complex patterns are critical for the production of integrated circuits and microelectronic components. In addition, positive photoresists generally exhibit better etch resistance and chemical stability, which contributes to their popularity in semiconductor manufacturing.

By application, the Advanced Packaging Photoresist Products can be divided into FO WLP, FI WLP, Others. The Flip Chip segment has always contributed major revenue to the market. In 2022, the Flip Chip division contributed revenue of 590.52M USD and has occupied 56.47% of the market share. Flip chip packaging is ideal for applications where miniaturization and high performance are critical. As demand for compact electronic devices continues to grow in industries such as consumer electronics and telecommunications, flip-chip technology offers a solution that enables smaller form factors without compromising performance. At the same time, flip-chip packaging enables efficient heat dissipation, making flip-chip technology the first choice for applications that require optimal heat dissipation. In fact, the increasing adoption of flip-chip packaging in key areas of the semiconductor, telecommunications and automotive industries has contributed significantly to their market dominance.

On basis of geography, the Advanced Packaging Photoresist Products market is segmented into North America, Europe, Asia-Pacific, South America, Middle East and Africa, etc. Asia-Pacific is currently the main market and has occupied 69.09% market share. The Asia-Pacific region, especially countries such as Japan, South Korea, Taiwan and China, has become a global semiconductor manufacturing center. These

countries have major semiconductor foundries and facilities with widespread adoption of advanced packaging processes utilizing photoresist products. The concentration of semiconductor manufacturing activities in the region is naturally driving demand for advanced packaging materials. Additionally, the Asia-Pacific region is a booming market for consumer electronics, including smartphones, tablets, wearables, and other electronics. Strong demand for these products is driving the need for advanced packaging solutions, in which photoresist materials play a vital role. As the region's electronics industry continues to grow, so does demand for advanced packaging photoresist products.

According to our calculations, the two indicators used to measure market concentration in 2022, CR5 and HHI, were 72.49% and 13.39% respectively. This means that the leading manufacturers in the market occupy the largest share, but the market is not very concentrated, and manufacturers in the market are still in fierce competition. Currently, the major players in the market include Tokyo Ohka Kogyo (TOK), DuPont, JSR Corporation, Fujifilm, Sumitomo Chemical, Merck KGaA, Shin-Etsu Chemical, KemLab, Jiangsu AiSen Semiconductor Material Co., Ltd.

The global Advanced Packaging Photoresist market size was estimated at USD 639.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 9.93% during the forecast period.
