Report Overview

Aerobic granular sludge is a granular activated sludge formed by microbial self-agglomeration. With a dense structure and large particle size, due to the limitation of oxygen mass transfer, the granular sludge presents an aerobic zone on the outside and anoxic or anaerobic zone on the inside, providing aerobic, facultative and anaerobic microorganisms. Each suitable living environment enables the aerobic granular sludge to carry out various aerobic and anaerobic metabolic activities. Compared with traditional activated sludge flocs, aerobic granular sludge has the following advantages: regular shape, compact and dense structure, good settling performance, high biomass, and at the same time, it has a variety of microbial functions, and the amount of excess sludge is small. It has become one of the most promising biological wastewater treatment technologies due to its high tolerance to biological toxins and organic load fluctuations.
