Report Overview

Agricultural Insect Netting is a specialized type of netting designed to protect crops and plants from pests and insects in agricultural settings. It is typically made from durable, lightweight materials such as polyethylene or polyester, which are resistant to UV rays, weather, and aging. This netting is characterized by its fine mesh structure that allows for proper air circulation, sunlight penetration, and water drainage while effectively preventing insects from reaching the plants. It is used in various agricultural applications, including fruit and vegetable cultivation, to reduce the need for chemical pesticides and to promote organic farming practices. The netting can be installed as a cover over the crops or as a barrier around the perimeter of the field, providing a physical barrier against a wide range of pests, from common insects to birds and larger animals.
