Report Overview

Agricultural Waste Pellets refer to a type of biomass fuel derived from the conversion of various agricultural by-products and waste materials into a compact, uniform, and easily transportable form. These pellets are created by processing organic waste such as straw, corn stalks, wood chips, and other plant-based residues, which are then compressed under high pressure to form dense, cylindrical shapes. The primary purpose of agricultural waste pellets is to provide a sustainable and eco-friendly alternative to traditional fossil fuels, offering a renewable energy source for heating, power generation, and industrial applications. Additionally, the use of agricultural waste pellets helps in waste management by reducing the environmental impact of agricultural by-products and promoting a circular economy.
