## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Agricultural Water Retaining Agent competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Agricultural Water Retaining Agent is a chemical substance or polymer material that can absorb, retain and slowly release water. It mainly improves the moisture status of the soil and provides a stable moisture environment for plant growth through its unique water absorption and water retention properties. Agricultural Water Retaining Agent can absorb and store a large amount of water, reduce the evaporation and loss of soil moisture, and improve the water retention capacity of the soil. This is particularly important for agricultural production in arid and semi-arid areas. At the same time, since Agricultural Water Retaining Agent can store a large amount of water and slowly release it to plants for use, it can reduce the number of irrigations and water consumption. This is of great significance for saving water resources and reducing agricultural production costs. The demand for agricultural water retaining agents varies significantly across different regions. In Asia-Pacific, the market is particularly dynamic due to the region's large agricultural base and increasing water scarcity challenges. Countries such as China and India are witnessing significant growth in the adoption of water retaining technologies to boost agricultural productivity and manage water resources more effectively. In contrast, the North American and European markets are also growing, driven by advancements in agricultural practices and a strong focus on sustainable farming solutions.

The global Agricultural Water Retaining Agent market size was estimated at USD 163.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
