Abstracts

Agricultural enterprise resource planning (ERP) systems are management software specifically designed for use in the agricultural sector. These systems are designed to help agricultural businesses manage all aspects of their business, including planting, breeding, inventory management, purchasing, sales, finance, human resources, and more. The software has covered multiple agricultural sectors, including planting, animal husbandry, and fisheries. In planting, it can optimize irrigation and fertilization plans by combining meteorological data; in animal husbandry, it enables environmental monitoring, disease early warning, and feed management; and in the distribution process, a traceability module ensures transparency of agricultural products from farm to table. In terms of customer groups, agricultural enterprises contributed over 50% of the market share in 2024, cooperatives and family farms accounted for 32%, and government agricultural management departments are also important clients, using the software for macro-control and data management of the agricultural industry. On the one hand, the SaaS model is rapidly emerging, accounting for 38% of the Chinese market in 2024, a 5 percentage point increase from 2023. Globally, cloud-based ERP deployments account for over 60%, and its advantages of flexible deployment and low-cost maintenance make it highly favored by small and medium-sized agricultural entities. On the other hand, cross-industry integration of technologies is accelerating, with ERP systems increasingly integrating deeply with technologies such as the Internet of Things, AI, and blockchain. By 2025, AI-driven predictive analytics modules will improve decision-making efficiency by 30%, while the application of blockchain technology will reduce the loss rate of agricultural products in circulation by 12 percentage points.

The global Agriculture ERP Software market size was estimated at USD 1568.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.60%

during the forecast period.
