Report Overview

Compared with traditional physical stores, AI smart vending machines (vending cabinets) do not require manual supervision and can operate 24 hours a day, greatly saving investment costs. Customers only need to scan their faces to open the cabinet door to select products, and close the door to automatically settle and complete their shopping. This fast payment method is undoubtedly a major breakthrough for the existing retail industry. Because the AI smart vending machine adopts advanced Internet of Things technology, merchants can monitor product sales, inventory quantity, customer orders and other information in real time, avoiding the impact of insufficient inventory on sales. At the same time, through big data analysis, merchants can understand customers' shopping habits and preferences, thereby adjusting product types and prices to increase sales. Because AI smart vending machines not only have intelligent functions that traditional vending machines cannot match, they also make shopping more convenient and can adapt to various environments and usage scenarios. Therefore, the future market prospects are very broad.
