## Abstracts

AI Video Generation Tool refers to an intelligent software tool that relies on artificial intelligence technologies to automatically generate video content. It has broken the limitations of traditional video production that requires professional equipment and technical skills, and greatly lowers the threshold for video creation. It is built on multimodal AI models and core technologies such as deep learning, computer vision, and natural language processing. For example, diffusion models and GANs (Generative Adversarial Networks) in deep learning can generate realistic dynamic images and characters; computer vision can analyze and arrange visual elements such as backgrounds and illustrations, and even realize the synchronization of AI avatar lip movements and speech; text - to - speech technology can convert text into natural and smooth dubbing, laying the foundation for the integration of audio and video. AI tools are reshaping the content production chain, enabling businesses to create personalized ads in bulk. For example, HeyGen's API supports real-time interaction between digital humans and users, while PixVerse can quickly create multilingual marketing videos, reducing the production time of a single short video from 6 hours to 45 minutes. The Asia-Pacific region, with its massive internet user base and developing digital economy, has become the world's largest market, with particularly strong demand in countries like China and India. North America, relying on its mature R&D system, leads in applications in film and technology. The Middle East and Africa, due to improved digital infrastructure, have become one of the fastest-growing emerging markets. Currently, the industry faces controversies regarding training data copyright and portrait rights, prompting companies to strengthen compliance. Future laws will further clarify the ownership of AI-generated content, and the industry may develop unified ethical standards to prevent deepfake technology from being used for malicious purposes, promoting healthy market development.

The global AI Video Generation Tool market size was estimated at USD 615.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.40% during the forecast period.
