## Abstracts

The AIGC solution is a systematic tool and service that leverages artificial intelligence to automatically generate content in various forms, including text, images, audio, and video. It is widely used in industries such as media, marketing, e-commerce, education, and gaming. By leveraging technologies such as large models, natural language processing, and generative adversarial networks, it helps companies improve content production efficiency, reduce costs, achieve personalized and scalable content output, and accelerate the intelligent transformation of the content industry. Market trends indicate that AIGC (artificial intelligence-generated content) is experiencing rapid growth, with the global market size continuing to expand. With the continuous advancement of large-scale models, generation algorithms, and computing infrastructure, AIGC has expanded from single-text generation to multimodal content (images, audio, video, etc.), and is widely used in various industries, including media, e-commerce, advertising, and gaming. In content-intensive sectors, AIGC has significantly reduced content creation costs and improved efficiency, becoming a key driver of the transformation of the digital content industry. While the AIGC market holds broad prospects, it also faces challenges and diverging trends. On the one hand, the proliferation and homogeneity of content are driving user demand for higher-quality and personalized content. On the other hand, disputes over copyright ownership, content security, and ethical standards are becoming increasingly prominent. In the future, AIGC solutions that offer customized capabilities for specific verticals, ensure the authenticity and reliability of generated content, and support compliance reviews will be more competitive. This also means that the evolution from "technical tools" to "trusted content platforms" will be a key path for industry development.

The global AIGC Solutions market size was estimated at USD 7280.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.00% during

the forecast period.
