Abstracts

Air Entraining Water Reducing Agent (AEWRA) is a type of chemical admixture specifically formulated for use in concrete. It serves dual functions by both reducing the amount of water required in the concrete mix and introducing tiny air bubbles throughout the mixture. These air bubbles enhance the durability and workability of the concrete by improving its resistance to freezing and thawing cycles, as well as providing better resistance to certain types of chemical attacks. By reducing the water content, AEWRA's also help to increase the strength and overall performance of the concrete, making it more suitable for a wide range of construction applications. In essence, AEWRA's are essential additives in modern concrete technology, offering significant benefits in terms of both performance and durability.

The global Air Entraining Water Reducing Agent market size was estimated at USD 1850.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.15% during the forecast period.
