## Abstracts

Air suspension system for commercial vehicles is a type of suspension that uses air springs or airbags instead of traditional coil or leaf springs to support and cushion the vehicle's weight. It is commonly used in heavy-duty trucks, buses, trailers, and other commercial vehicles. The system relies on compressed air to adjust the suspension's height, providing a smoother and more comfortable ride while maintaining the vehicle's load-carrying capacity. Air suspension systems in commercial vehicles have gained significant traction in recent years due to the numerous benefits they offer. These systems utilize air springs or airbags instead of traditional coil or leaf springs to support and cushion the vehicle's weight. North America and Europe regions showed significant adoption of air suspension systems due to the well-established commercial vehicle markets and the focus on high ride comfort and safety standards.
