Report Overview

An Airbag Igniter, also known as a squib or initiator, is a crucial component in the deployment system of automotive airbags. It is a small, pyrotechnic device designed to rapidly produce a significant amount of gas when activated, inflating the airbag cushion during a collision. The igniter is triggered by the vehicle's safety system upon detecting a severe impact, such as a car crash. It ignites a propellant, which generates the necessary gas to fill the airbag in milliseconds, providing a cushioning effect to protect the occupants from the force of the impact. The airbag igniter is engineered for reliability and safety, ensuring that it functions correctly under high stress conditions and contributes to the overall effectiveness of the vehicle's passive safety features.
