## **Abstracts**

Composite materials are comprised of at least two parts: the reinforcement, which provides special mechanical properties such as stiffness or strength, and the matrix material, which holds everything together. Ceramic matrix composites (CMCs) are a special type of composite material in which both the reinforcement (refractory fibers) and matrix material are ceramics. In some cases the same kind of ceramic is used for both parts of the structure, and additional secondary fibers may also be included. Because of this, CMCs are considered a subgroup of both composite materials and ceramics.

The global Aircraft Engine Ceramic Matrix Composite (Cmc) market size was estimated at USD 1584.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.80% during the forecast period.
