### Report Overview

The Aircraft Flight Inspection System (FIS) is a specialized suite of avionics and ground-based equipment designed to verify, calibrate, and certify the accuracy and reliability of navigation aids (NAVAIDs), including Instrument Landing Systems (ILS), Very High Frequency Omnidirectional Range (VOR), Distance Measuring Equipment (DME), and other critical air traffic control infrastructure. These systems ensure compliance with international aviation standards (e.g., ICAO, FAA) by conducting precision tests on signal accuracy, coverage, and interference levels. Flight inspection aircraft are typically equipped with advanced sensors, data recorders, and real-time analysis tools to assess the performance of ground-based navigational aids, ensuring operational safety for commercial, military, and general aviation. The demand for FIS is driven by regulatory mandates, airport expansions, and modernization of aging aviation infrastructure, with key players including government agencies, private operators, and aerospace contractors.
