Report Overview

An Aircraft Ground Power Supply (GP) is a critical piece of equipment used in the aviation industry to provide electrical power to aircraft while they are on the ground, particularly during maintenance, pre-flight checks, and while parked at gates. This system ensures that the aircraft's electrical systems, such as lighting, air conditioning, and avionics, can function without relying on the aircraft's engines or auxiliary power units (APUs). The GP supply typically consists of a power generator, cabling, and connectors that interface with the aircraft's electrical systems. It is designed to meet specific voltage and frequency requirements, often 28V DC or 115/200V AC, depending on the aircraft type. The Aircraft Ground Power Supply is essential for maintaining the safety and efficiency of ground operations, as it reduces the need for engine run time, thereby saving fuel and reducing emissions.

In 2024, the global Aircraft Ground Power Supply market is projected to reach approximately USD xx Million, with expectations to grow at a compound annual growth rate (CAGR) of around xx between 2024 and 2033.
