Report Overview

An Aircraft and Subsystem refers to the comprehensive collection of components, systems, and parts that together form a complete aircraft. This encompasses the airframe, engines, avionics, and various other subsystems that enable the aircraft to function effectively and safely. The airframe includes the structural components such as the fuselage, wings, and tail, which provide the physical framework for the aircraft. Engines are the power plants that generate thrust, propelling the aircraft through the air. Avionics encompass the electronic systems that control and monitor various functions, including navigation, communication, and flight control. Subsystems are specialized components or groups of components that perform specific tasks, such as the landing gear, environmental control systems, and fuel systems. Each subsystem is designed to work in harmony with the others to ensure the overall performance, safety, and reliability of the aircraft.
