Abstracts

An Airfield Ground Lighting (AGL) System is an essential safety and navigation infrastructure for airports, comprising a network of lights and visual aids installed on runways, taxiways, and aprons. These systems guide pilots during takeoff, landing, and taxiing, especially under low visibility conditions such as night, fog, or adverse weather. Key components include runway edge lights, threshold lights, approach lighting systems, taxiway lights, and obstruction lights, all of which are designed to enhance the visibility of the airfield layout and ensure safe aircraft operations. AGL systems are crucial for maintaining operational efficiency and safety in aviation, complying with international standards set by organizations like ICAO (International Civil Aviation Organization).

The global Airfield Ground Lighting Agl System market size was estimated at USD 680.45 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
