Report Overview

Airlaid nonwoven material is a type of engineered fabric that is produced through a unique process known as air laying. This method involves using a high-speed air stream to disperse and interlace short fibers, such as wood pulp or synthetic fibers, onto a moving screen. The fibers are then bonded together using mechanical, chemical, or thermal means to create a web-like structure. The resulting material is characterized by its softness, high absorbency, and excellent bulk, making it suitable for a wide range of applications, including hygiene products, medical supplies, filtration, and insulation. Airlaid nonwovens are valued for their versatility, as they can be customized to meet specific performance requirements, and their environmental benefits, as they can be made from renewable resources and are often recyclable.
