Report Overview

An Airslide gravity conveyor is a pneumatic conveying system used to transport powdered or granular materials in bulk. It consists of a porous fabric material placed within a trough or channel through which air is forced, creating an air cushion that fluidizes the material and allows it to flow smoothly along the conveyor path. The air pressure underneath the fabric keeps the material suspended and prevents it from sticking to the conveyor surface, enabling gentle handling and minimizing product degradation. Airslide gravity conveyors are commonly used in industries such as cement manufacturing, food processing, and chemical processing for the efficient and dust-free transportation of dry bulk materials over long distances and across various elevations.
