Report Overview

Alcohol-based antibacterial hand sanitizers are personal hygiene products designed to eliminate or reduce the presence of germs, bacteria, and viruses on the hands. These sanitizers typically contain a high percentage of alcohol, usually ethanol or isopropanol, which acts as an effective antimicrobial agent. They are formulated to provide a quick and efficient way to clean hands without the need for water and soap, making them ideal for use in situations where handwashing facilities are not readily available. The product is applied directly to the hands, and the alcohol evaporates, taking away the microorganisms and leaving the hands sanitized. It is important to note that while alcohol-based hand sanitizers are effective against many types of bacteria and some viruses, they may not be as effective against certain types of germs, such as norovirus or *Clostridium difficile* spores, and are not a substitute for thorough handwashing with soap and water in all situations.
