## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Alkaline Cyanide-free Galvanizing Brightener competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Alkaline Cyanide-free Galvanizing Brightener production reached approximately 185000 tons, with an average global market price of around US\$ 320 per ton. Alkaline cyanide-free zinc brighteners are additives used in alkaline cyanide-free zinc plating processes, primarily to improve the appearance and performance of the zinc coating. Without the use of highly toxic cyanide, they achieve a brighter, smoother surface through the synergistic effects of organic or inorganic compounds, while also enhancing the coating's adhesion, ductility, and corrosion resistance. The Alkaline Cyanide-free Galvanizing Brightener market is a segment of the metal finishing industry focused on surface treatment chemicals that improve the appearance and corrosion resistance of galvanized metals without the use of cyanide, which is highly toxic. These brighteners are primarily used in steel and iron galvanizing lines to produce shiny, uniform coatings while complying with increasingly stringent environmental and workplace safety regulations.

The global Alkaline Cyanide-free Galvanizing Brightener market size was estimated at USD 59.2 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
