Abstracts

Raised floor, also known as dissipative static floor, is a floor system composed of adjustable brackets, beams, panels and other components. The characteristic of this floor is its overhead structure, that is, there is a certain suspended space between the panel and the horizontal ground. The base material and veneer material of the raised floor are varied, including steel base, aluminum base, composite base, particle board base (wood base), calcium sulfate base, etc., and the surface is often made of anti-static glazed tiles or anti-static polished tiles to ensure the stability and durability of its anti-static performance. The design of the raised floor enables it to be grounded or connected to any lower potential point so that the charge can be dissipated. The resistance of this floor is usually between 10^5 to 10^9 ohms, which meets the requirements of anti-static technology in places such as computer rooms. The raised floor not only has anti-static function, but also has environmental protection, fire prevention, high wear resistance, high life (up to more than 30 years), high load-bearing (uniform load can reach more than 1600kg/square meter), waterproof, moisture-proof and other properties. Steel-based Raised Access Floor is an Raised Access Floor with steel as the base material. It is usually assembled by adjustable brackets, beams, panels, etc. The panels are mostly made of anti-static glazed tiles or anti-static polished tiles as the surface layer, while the bottom layer uses composite all-steel floor, and the edges are also sealed with conductive tape. This kind of floor has stable anti-static performance, environmental protection, fire resistance, high wear resistance, long life (more than 30 years), high load (uniform load more than 1600kg/square meter), waterproof, moisture-proof and other properties, especially suitable for various types of computer rooms, such as data centers, server rooms, etc. With the advancement of urbanization and the improvement of people's requirements for comfortable indoor and outdoor environments, Raised Access Floor (including steel-based elevated floors) plays an increasingly important role in indoor and

outdoor decoration. Especially in places such as data centers and server rooms, steel-based elevated floors are favored for their excellent performance and stability. With the rapid development of industries such as semiconductors, electronics, and communications, these industries are also increasing their demand for production environments with high performance requirements such as cleanliness, anti-static, and high load-bearing, which has promoted the continued growth of the steel-based elevated floor market. Competition within the elevated floor industry is becoming increasingly fierce, mainly due to slow industry growth, a large number of competitors, and serious product homogeneity. In order to compete for market share, companies have increased their investment in research and development, improved product quality and service levels, and won the favor of customers. The core manufacturers of steel-based elevated floors in the world include Kingspan, Polygroup, Global IFS, ASP, and Changzhou Huatong, etc. The top three manufacturers account for about 25% of the global market share.

The global Steel Raised Access Floor market size was estimated at USD 823.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
