Report Overview

Allyloxy Polyethylene Glycol (APEG) Materials refer to a class of polymeric compounds that are derived from polyethylene glycol (PEG), a widely used synthetic polymer known for its biocompatibility, solubility, and non-toxicity. In APEG, the hydroxyl groups of PEG are partially or fully substituted with allyl ether groups, which introduce reactive sites for further chemical modifications. These materials possess the advantageous properties of PEG, such as solubility in water and organic solvents, low toxicity, and high stability, while the allyloxy groups enable them to be cross-linked or grafted onto other molecules, making them versatile in various applications. APEG materials are commonly used in pharmaceuticals, biomaterials, and coatings due to their ability to form hydrogels, improve drug delivery systems, and enhance the performance of surfaces. Their unique combination of properties allows for tailored applications in a broad range of industries, including medical, cosmetic, and industrial sectors.
