Report Overview

AlOx-coated polyester film is a specialized material where a thin layer of aluminum oxide (AlOx) is deposited onto polyester film to enhance its barrier properties, particularly against moisture, oxygen, and other gases. This coating improves the film's performance in applications requiring high barrier protection while maintaining flexibility, transparency, and mechanical strength. It is widely used in industries such as food packaging, electronics (e.g., flexible displays and solar panels), and pharmaceuticals, where extended shelf life and protection from environmental factors are critical. The AlOx coating provides superior barrier properties compared to traditional metallized films, often at a lower cost and with better recyclability, making it a preferred choice for sustainable packaging solutions. The market for this film is driven by increasing demand for high-performance, eco-friendly packaging materials and advancements in coating technologies that enhance efficiency and reduce production costs.
