### Report Overview

Alpha Tocopheryl Acid Succinate (ATA) is a synthetic derivative of natural vitamin E, also known as alpha-tocopherol. It is a lipophilic antioxidant that possesses both antioxidant and anti-inflammatory properties. Structurally, ATA is formed by attaching a succinate group to the chromanol ring of alpha-tocopherol, which enhances its water solubility and improves its bioavailability. This modification allows for better absorption and distribution within the body. ATA is used in various applications, including pharmaceuticals, as a potential therapeutic agent for certain diseases due to its antioxidant and anti-inflammatory effects. It is also utilized in cosmetic formulations for its skin-protecting and anti-aging properties. The product is typically supplied in a powder form and is characterized by its high purity and stability, making it suitable for use in a range of products where the benefits of vitamin E are desired.
