Report Overview

Aluminium Cable Glands are electrical accessories designed to securely and safely terminate and seal cables entering or exiting an electrical enclosure. These glands are made from high-quality aluminium, which offers excellent corrosion resistance and durability. They are primarily used in various industries, including construction, marine, and industrial applications, to protect cables from environmental factors such as water, dust, and mechanical damage. Aluminium Cable Glands are available in different sizes and thread types to accommodate a wide range of cable diameters and termination requirements. They typically consist of a gland body, a sealing insert, and a gland nut, which work together to create a watertight and gas-tight seal around the cable. The gland body houses the cable, the sealing insert provides compression to the cable, and the gland nut tightens the assembly to ensure a secure and leak-proof connection.
