Report Overview

Aluminium Metal Organic Framework (Al-MOF) is a type of porous material composed of metal ions or clusters coordinated to organic ligands. In the case of Al-MOF, aluminium ions serve as the metal nodes, which are connected by organic linkers to form a three-dimensional network structure. This material exhibits high surface area, tunable pore size, and excellent thermal and chemical stability, making it suitable for various applications such as gas storage, separation, catalysis, and drug delivery. The unique properties of Al-MOFs arise from the combination of the metal's electronic and coordination properties with the structural diversity of the organic ligands, allowing for the design of materials with specific functionalities tailored to the desired application.
