## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Aluminum for Automobile Body competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Aluminum for automobile body refers to aluminum alloys and sheet products engineered for passenger and commercial vehicle body structures, offering lightweighting, corrosion resistance and good formability to improve fuel efficiency and crash performance. Production in 2024 was 631,579 tons and the average price was \$2,850 per ton. Typical single-line annual capacity was about 2,000 tons and the average gross margin was about 16%. The upstream includes electrolytic aluminum ingots, alloying elements (mainly magnesium and silicon) and casting/rolling and surface-treatment equipment, with representative suppliers such as Alcoa, Rio Tinto, Rusal and Aluminum Corporation of China. The midstream comprises melting, casting, rolling, annealing and precision surface finishing to deliver required mechanical properties and surface quality. The downstream serves passenger cars and commercial vehicles, with representative customers including Tesla, BYD, SAIC Motor and Volkswagen. The market outlook for aluminum for automobile body remains structurally strong as global automakers accelerate lightweighting to meet tightening fuel-economy and emissions regulations, while electric vehicles further amplify the need for high-strength, formable and corrosion-resistant aluminum body materials. Demand growth is supported by the shift toward larger battery packs, which increases the weight-offset requirement, and by the rapid adoption of aluminum-intensive body structures in both passenger and commercial vehicles. Over the next years, penetration will rise as more OEMs adopt mixed-material architectures, and supply chains continue to optimize rolling, joining and surface-treatment technologies to deliver consistent performance at scale.

The global Aluminum for Automobile Body market size was estimated at USD 1800.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
