Abstracts

The outside of the Aluminum Foil Thermal Insulation Bag is aluminum foil and the inside is non-woven fabric. Heat reflection means that the foil-like inner layer of the bag reflects the food's radiant heat energy back, rather than absorbing it and letting it escape the bag. As a result, the food inside retains its original temperature, flavor and moisture longer than a regular bag.

The global Aluminum Foil Thermal Insulation Bag market size was estimated at USD 185.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
