Abstracts

Aluminum nitride (AlN) ceramic heater for semiconductors is a device used to heat semiconductor materials. It is mainly made of aluminum nitride ceramic material, has excellent thermal conductivity and high temperature resistance, and can operate stably at high temperatures. The heater usually uses a resistance wire as a heating element. By energizing the resistance wire to heat up, the heat is transferred to the surface of the heater to achieve heating of the semiconductor material. Aluminum nitride ceramic heaters for semiconductors play an important role in the semiconductor production process and can be used in processes such as crystal growth, annealing, and baking. Alumina ceramic heaters are industrial heaters with very high reliability developed based on ceramic stacking technology in ceramic packaging for high-reliability integrated circuits. A new type of heater widely used in automotive parts, household appliance heating elements, industrial heating elements, and other fields. Its applications in semiconductors include electrostatic chucks, stepper photolithography machines, etc.

The global Aluminum Nitride and Alumina Ceramic Heaters for Semiconductors market size was estimated at USD 559.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.00% during the forecast period.
