Abstracts

Photoelectric glass is one of the most innovative high-tech glass products used in construction. In the production process of photovoltaic glass, alumina is usually mixed with other chemical components (such as silicon dioxide, magnesium oxide, etc.) as one of the raw materials, and then subjected to high-temperature melting, forming, annealing, cutting, and inspection processes to finally produce photovoltaic glass with excellent performance. For example, alumina is widely used in the production of photovoltaic glass, especially ultra-thin and highly transparent photovoltaic glass, such as ultra white rolled glass and ultra white float glass. These photovoltaic glasses have excellent characteristics such as high solar transmittance, high mechanical strength, and high flatness, which can significantly improve the output power of solar panels.

The global Aluminum Oxide For Photoelectric Glass market size was estimated at USD 280.45 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
