Report Overview

Amino-2-propanol (also known as isopropanolamine or MIPA) is an organic compound belonging to the class of alkanolamines, characterized by its dual functional groups—an amino group and a hydroxyl group—attached to a propane backbone. It is a versatile chemical intermediate widely used in industries such as personal care, agrochemicals, and gas treatment due to its surfactant, emulsifying, and pH-adjusting properties. In personal care, it functions as a buffering agent in shampoos, soaps, and cosmetics, while in gas treatment, it helps remove acidic contaminants like hydrogen sulfide and carbon dioxide. The agrochemical sector utilizes it as a key ingredient in herbicides and pesticides. Its chemical stability, water solubility, and low toxicity make it a preferred choice in formulations requiring mild alkaline properties. The market demand is driven by its multifunctional applications, regulatory compliance, and cost-effectiveness compared to alternatives like ethanolamines. Growth is further influenced by expanding end-use industries, particularly in emerging economies, though environmental regulations and raw material price volatility may pose challenges.

This report provides a deep insight into the global Amino-2-propanol market covering all its essential aspects.
