Report Overview

Amorphous Magnetic Powder is a type of magnetic material that is characterized by its non-crystalline, or amorphous, structure. It is produced through a process that involves rapidly cooling molten metal alloys, which prevents the formation of a regular crystalline structure. This material exhibits unique magnetic properties due to its random atomic arrangement, which can include high permeability, low coercivity, and excellent soft magnetic characteristics. Amorphous Magnetic Powder is often used in applications requiring high magnetic field sensitivity and low energy loss, such as in transformers, inductors, and sensors. The amorphous nature of the powder also allows for flexibility in shaping and sizing, making it suitable for a wide range of industrial and electronic applications where precise control over magnetic properties is necessary.
