Report Overview

Angle encoder modules are mainly used to detect and measure the angular position, speed and direction of rotating objects. It achieves precise positioning of angles by converting mechanical motion (usually rotation) into electrical signals (such as digital pulses or analog voltages). As the rotating shaft moves, these structures will change the light beam, magnetic field or potential difference passing through them, thereby generating corresponding encoded signal outputs. These modules are widely used in industrial automation, robotics, aerospace, precision instruments and various occasions that require high-precision angle measurement.
