Report Overview

Animal Feed Acidifiers are a class of feed additives used in animal nutrition to maintain and enhance the health and performance of livestock. These products are designed to lower the pH level in the gastrointestinal tract, which helps to optimize digestion, prevent the growth of harmful bacteria, and improve nutrient absorption. Acidifiers can be organic or inorganic, and examples include formic acid, propionic acid, and benzoic acid. They are commonly used in poultry, swine, and ruminant production to improve feed efficiency, reduce the risk of gastrointestinal diseases, and enhance overall animal welfare. The use of acidifiers is also associated with better growth rates, improved feed conversion ratios, and a reduction in the emission of harmful gases from animal waste.
