### Report Overview

An Anionic Antistatic Agent is a type of chemical compound specifically designed to reduce or eliminate static electricity in various applications. This product is characterized by its anionic nature, meaning it carries a negative charge when dissolved in water. It functions by adsorbing onto surfaces, thereby altering their electrical properties to prevent the buildup of static charge. Anionic Antistatic Agents are widely used in industries such as plastics, textiles, and paper manufacturing to enhance product quality, ensure safety, and improve processing efficiency. They are also employed in electronic and healthcare settings to prevent static-related damage or interference. The effectiveness of these agents is often measured by their ability to lower surface resistivity and reduce triboelectric charging, which are key factors in static control.
