## Abstracts

U-Shaped Glass is a U shaped cast glass. Cast in sheet form whilst still molten, it is rolled and the side wings are formed to create a U shaped profile. It is commonly referred to as 'channel glass' and each individual length 'a blade'. It can be used internally and externally and is a very popular glazing solution selected by architects because of its unique, aesthetic characteristics. U-Shaped Glass can be used in straight and curved applications and the channels can be fixed horizontally or vertically. The blades can be installed single or double glazed. One of the main benefits to architects is that U-Shaped Glass is available in varying dimensions, up to a maximum of 7 metre lengths, and is designed to be cut to size. The nature of how U glass is connected and secured to the perimeter frames means that by fitting the blades vertically, long U-Shaped Glass facades can be achieved without the need to break the design with (visible) intermediate supports.

**Architectural Applications:** Annealed u-shaped glass is widely used in contemporary architectural designs. It is often employed in building facades, interior partitions, railings, and other architectural elements due to its aesthetic appeal and versatility in design.

**Increased Demand for Unique Designs:** The demand for custom and unique designs in architectural glass has been rising. Annealed u-shaped glass provides architects and designers with the flexibility to create distinct and visually appealing structures, contributing to the increasing demand for this product.

**Energy Efficiency and Sustainability:** There's a growing trend toward incorporating energy-efficient and sustainable building materials, including u-shaped glass. Manufacturers are developing annealed glass with improved insulation properties to enhance energy efficiency and reduce a building's environmental impact.

The global Annealed U-Shaped Glass market size was estimated at USD 908.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
