Report Overview

Anti-Insulin Antibody is an antibody that specifically recognizes and binds to insulin, a hormone produced by the pancreas that plays a vital role in regulating blood sugar levels. These antibodies are used in research and diagnostic settings to study insulin signaling, glucose homeostasis, and the pathophysiology of diabetes. In patients with type 1 diabetes, the immune system can produce anti-insulin antibodies as part of the autoimmune response that destroys insulin-producing cells in the pancreas. These antibodies can also be developed as therapeutics to enhance insulin sensitivity or to provide a substitute for insulin in the treatment of diabetes.
