Report Overview

The Anti-PID EVA Film for PV Modules is a specialized product designed to enhance the performance and longevity of photovoltaic (PV) modules. This film is engineered to mitigate the effects of Potential Induced Degradation (PID), a phenomenon that can significantly reduce the efficiency and lifespan of solar panels. The Anti-PID EVA Film is made from Ethylene-Vinyl Acetate (EVA), a copolymer known for its excellent electrical insulation properties, high transparency, and resistance to UV radiation. It serves as a protective layer within the PV module, sandwiched between the glass and the solar cells, and helps to maintain the module's structural integrity while also preventing moisture and other environmental factors from causing PID. The film's anti-PID properties are achieved through the incorporation of specific additives or treatments that neutralize the effects of electrical potential differences, thus preserving the performance and reliability of the solar panels over time.
