### Report Overview

An Anti Wandering System is a security solution designed to prevent individuals, particularly those with cognitive impairments such as Alzheimer's or dementia, from wandering off or getting lost. This system typically consists of a monitoring device, such as a bracelet or wearable sensor, and a corresponding receiver or control panel. The device tracks the individual's movements within a designated area, and if they attempt to leave this area, an alarm is triggered. This alert notifies caregivers or staff members, allowing them to intervene and ensure the safety of the individual. The system is often used in residential care facilities, hospitals, and assisted living communities to provide a secure environment while maintaining the freedom and dignity of the residents. The effectiveness of an Anti Wandering System lies in its ability to balance supervision with autonomy, offering peace of mind to both the individuals being monitored and their caregivers.
