### Report Overview

Antimony trioxide flame retardant for plastics is a chemical compound, specifically an inorganic compound, used as a flame retardant additive in various plastic materials. It is primarily composed of antimony (Sb) and oxygen (O) atoms, with the chemical formula  $Sb_2O_3$ . This product is widely utilized in the plastics industry to enhance the fire resistance and safety of plastic products. Antimony trioxide works by disrupting the combustion process, reducing the heat release rate, and promoting the formation of a char layer that acts as a barrier to oxygen and heat. It is commonly combined with halogenated flame retardants to create synergistic effects, enhancing the overall flame retardancy of the plastic material.
