Report Overview

Butylated hydroxyanisole (BHA) is a synthetic antioxidant widely used in food, cosmetics, pharmaceuticals, and industrial applications to prevent oxidation and extend shelf life. It works by inhibiting the degradation of fats, oils, and other organic compounds, maintaining product stability under exposure to heat, light, and oxygen. BHA is commonly found in processed foods, packaging materials, skincare products, and pet foods, though its use is regulated due to potential health concerns. While effective, it faces competition from natural antioxidants like vitamin E and rosemary extract, as well as regulatory scrutiny in some regions.
