Report Overview

Antistatic coating is a special surface treatment technology, mainly used to prevent the generation and accumulation of static electricity. It is achieved by coating a layer of antistatic material on the surface of the object. Antistatic coating usually uses materials with better conductivity, such as metal, carbon, etc., which are evenly plated on the surface of the object to form a conductive film. This can effectively absorb or eliminate the electrostatic charge on the surface of the object, thereby reducing the generation and accumulation of static electricity, and avoiding danger or damage caused by electrostatic discharge. Antistatic coatings are widely used in electronics, semiconductors, medical, aerospace and other fields.
