Report Overview

Application Maintenance Services (AMS) refer to the ongoing support and optimization of software applications post-deployment, ensuring they remain functional, secure, and aligned with evolving business needs. These services encompass bug fixes, performance tuning, updates, security patches, and minor enhancements to extend the lifecycle of applications while minimizing downtime. AMS providers often operate under service-level agreements (SLAs) to guarantee responsiveness and reliability, catering to businesses that rely on critical applications but lack in-house expertise or resources for continuous maintenance.
