Report Overview

An aquatic exercise bike, also known as an underwater or water bike, is a type of stationary bicycle designed to be used in a pool. These bikes are fully submerged and allow users to pedal while seated in the water, typically at waist or chest level. The resistance provided by the water makes pedaling more challenging than on a regular bike, providing a low-impact, high-resistance workout that can be particularly beneficial for individuals recovering from injuries, dealing with joint pain, or looking for a form of exercise that minimizes stress on their body. Aquatic exercise bikes are often used in physical therapy, rehabilitation programs, and fitness centers that offer aquatic fitness classes.
