Abstracts

Argon arc torches are the main tool used in argon arc welding, which is a welding technique that uses argon as a shielding gas. [1] Also known as argon gas shielded welding. It is to pass argon protective gas around the arc welding to isolate the air from the welding area and prevent the oxidation of the welding area. The argon arc torch has a shunt, a ceramic nozzle, a tungsten pole, a tungsten pole clamp, a pressure cap (divided into lengths), a connecting body, and a long cap. The welding wire is fed through the wire wheel, the contact tip conducts electricity, an arc is generated between the base material and the welding wire, the welding wire and the base material are melted, and the arc and molten metal are protected by inert gas argon for welding.

The global Argon Arc Welding Torch Accessories market size was estimated at USD 185.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.85% during the forecast period.
