Report Overview

Aripiprazole Lauroxil is an extended-release injectable medication belonging to the class of atypical antipsychotic drugs. It is primarily used for the treatment of schizophrenia in adults. As an extended-release formulation, it allows for a longer duration of action compared to oral medications, which can help improve patient compliance by reducing the frequency of dosing. Aripiprazole Lauroxil works by modulating the activity of dopamine and serotonin receptors in the brain, which are neurotransmitters involved in mood regulation and psychotic symptoms.
