Report Overview

Aromatic Rubber Process Oils (ARPOs) are a class of petroleum-based oils that are specifically formulated to enhance the processing characteristics of rubber compounds. These oils are derived from aromatic hydrocarbons, which are extracted from crude oil during the refining process. They are primarily used as plasticizers and extenders in the rubber industry to improve the processability of rubber compounds, reduce the viscosity of rubber mixes, and enhance the flexibility and elasticity of the final rubber product. Aromatic Rubber Process Oils are particularly effective in rubber formulations that require high processing temperatures and are commonly used in the production of tires, hoses, seals, and various other rubber goods. The selection of an appropriate ARPO depends on the specific requirements of the rubber product, such as its resistance to heat, oxidation, and aging, as well as its mechanical properties.
