Report Overview

A Heart Annuloplasty Ring is a medical device designed to repair or reconstruct the annulus, which is the fibrous ring that surrounds the opening between the atrium and ventricle of the heart. This device is typically used in cardiac surgeries to treat mitral valve regurgitation or other valve-related conditions. The annuloplasty ring functions by reshaping and stabilizing the annulus, thereby improving the valve's coaptation and reducing or eliminating the backflow of blood. Made from materials such as??, carbon, or other synthetic fabrics, these rings come in various sizes and shapes to accommodate different patient anatomies. The implantation of a Heart Annuloplasty Ring is a critical step in annuloplasty procedures, aiming to restore the valve's proper function and enhance the patient's cardiac performance.
