Report Overview

Artificial spinal membrane is a material prepared by artificial synthesis or bioengineering technology to replace or repair damaged dura mater. It is designed to simulate the structure and function of the natural dura mater, provide protection and support for the damaged nervous system, and promote tissue regeneration and repair. In neurosurgery and spinal surgery, damage to the dura mater is a common problem, which may lead to complications such as epidural scar formation, cerebrospinal fluid leakage, and pseudospinal meningocele (PSPM). Therefore, the development and application of artificial dura mater is of great significance to improve surgical results and reduce complications.
